SyAM Announces Technology Partnership with NeoGenesys OEM relationship marks SyAM's first Mexican Partnership

Nashua, N.H. (April 9, 2009) –SyAM Software is announcing today a technology partnership with Neogenesys. As a part of this agreement, Neogenesys will integrate SyAM management products with Intel® remote management vPro™ Technology into its own line of Intelligent Terminals and servers to increase the manageability of its solutions for its customers throughout Latin America.

The OEM relationship marks SyAM Software's first ever such partnership in Mexico and will enable Neogenesys – an Intel® Mexico Strategic solution partner – to offer fast and effective Server and desktop advanced management solutions for its Expanda line of Intelligent terminals based on Intel's Core2 Duo and vPro chipsets. SyAM Software will further enable Neogenesys customers to remotely manage a large number of Expanda terminals, servers and legacy systems from a single console.

The software allows IT administrators to easily and with greater agility manage networks of PCs and servers, reducing downtime and increasing productivity. SyAM Software enables IT managers to proactively manage all of their IT Assets: know what they have, where its located, how its configured, its change history and most importantly know of issues in advance before down time occurs.

"We are pleased to be working with NeoGenesys", states Nick Thickins, CEO of SyAM Software. "SyAM provides NeoGenesys customers with a scalable and affordable management solution, enabling their customers to centralize and proactively manage their terminals and legacy systems. SyAM continues to expand its global footprint and our relationship with NeoGenesys is a proof point that our value-added management tools continue to make impressive strides for customers here at home and, through valued resellers like Neogenesys, throughout the world."

"This strategic partnership between SyAM and Neogénesys will allow our company to bundle and offer not only advanced technology products and services, but also very solid management tools that complement our solutions and makes them more appealing and complete in terms of what other vendors can offer," said Luis Perez Galvan, president, Neogenesys. "As a local OEM we manufacture rack, blades and pedestal servers and Intelligent Terminals. The integration of the SyAM productline in all of our products, increases the manageability and level of service first class corporations expect from traditional brands and makes our products more appealing to larger corporations, government and small to medium companies."

He added, "This partnership will provide our customers with the confidence that in deploying our solutions, their technical staff can manage their complete infrastructure from any location, increasing the organization's level of service, availability, responsiveness and performance."

About Neogenesys

Neogenesys is a Mexican based private company. Founded in 2000, the company provides high technology products and services, bundled in all inclusive solutions, that solve specific infrastructure pain areas to corporations of all sizes and markets. The company offers its products and services in all the country of Mexico as well as some countries of Central and South America. By offering consulting, pre & post sale support and training, Neogenesys can extend its geographic reach without boundaries. Neogenesys' enhanced Value Offering includes End-to-End Solution Integration specifically for the customer requirements, not offering pre-packed monolithic "solutions", we can achieve this mainly due by the nature of our products, that allow us to mix and match like "Lego" building blocks, in order to integrate a new solution on an expedite and efficient manner.

About SyAM Software:

SyAM Software is a developer of Systems Area Management tools enabling pro-active operational monitoring, remote management, patch deployment and power management. The solution works across all Notebooks, Desktops, Servers and RAID devices running Windows, Linux and OS X. All products are easy to deploy, learn, and use and can be downloaded from www.syamsoftware.com free of charge. Management Utilities and System Client products can be used for free indefinitely. Their functionality is expanded when used in conjunction with System Area Manager, the central management console that is licensed based upon the number of systems being managed. SyAM Software solutions provide increased levels of visibility and management for IT professionals at SMB to enterprise sized organizations. Using a web browser they have access to IT Assets at all time so they know what they have, where it's located, how it's configured, and its operational health state in real-time. Major tangible and measurable business benefits include reduced energy costs, simplified and automated asset tracking, remote monitoring and resolution, reduced complexity and reduced total cost of ownership.
