SyAM Software Announces System Area Manager V4.3; Support for Windows 7 and Expanded Hardware Compatibility

Nashua, N.H. (November 2, 2009) –SyAM Software, a developer of Systems Area Management tools enabling pro-active operational monitoring, remote management, application and patch deployment and intelligent power management, has announced today the release of its Version 4.3. System Area Manager and System Client software. The release includes support for Microsoft Windows® 7 operating system, expanded hardware compatibility and integration with its recently announced Site Manager product.

SyAM's management suite contains the key technologies to enable IT administrators to pro-actively manage their multi-vendor system platforms running disparate operating systems through a centrally based interface browser. Whether managing their own network, their remote offices or remote customers, the technology provides real-time status, predictive failure identification and remote access, even when systems have failed.

Version 4.3 hardware compatibility is expanded to include the latest generation of motherboards available from Intel, Super Micro, ECS, MSI and Foxconn.

“The version 4.3 release of System Area Manager demonstrates SyAM’s enduring commitment both to keeping pace with the speed of technology innovation, including support for operating systems such as Windows 7 and to our OEM customers, resellers and partners, whose relationships enable our continuing level of success,” said Nick Thickins, CEO of SyAM Software.

Version 4.3 is currently shipping and available for download. Further information is available at www.syamssoftware.com.

About SyAM Software:

SyAM Software is a developer of Systems Area Management tools enabling pro-active operational monitoring, remote management, patch deployment and power management. The solution works across all Notebooks, Desktops, Servers and RAID devices running Windows, Linux and OS X. All products are easy to deploy, learn, and use and can be downloaded from www.syamsoftware.com free of charge. Management Utilities and System Client products can be used for free indefinitely. Their functionality is expanded when used in conjunction with System Area Manager, the central management console that is licensed based upon the number of systems being managed and Site Manager, which provides a central management interface to all customer sites. SyAM Software solutions provide increased levels of visibility and management for IT professionals at SMB to enterprise sized organizations. Using a web browser they have access to IT Assets at all time so they know what they have, where it's located, how it's configured, and its operational health state in real-time. Major tangible and measurable business benefits include reduced energy costs, simplified and automated asset tracking, remote monitoring and resolution, reduced complexity and reduced total cost of ownership.
